EQUITY PARTICIPATION

Investing in ECO EFX Solutions

Hamburg, Germany

Hamburg harbour illustration

Ships, road fleets and industrial equipment will remain in service as operators change how they power them. From Hamburg, ECO EFX Solutions develops and markets technologies for the engines in use today. We welcome confidential discussions with financial and strategic investors about a stake in the company.

The operating question

A shipowner budgets for a voyage. A municipal fleet budgets for a collection round. In each case, a change in fuel use means little without knowing the work delivered. We consider operating cost and environmental impact together.

From technology to fleet operations

We work with technology partners and distributors to bring solutions to operators of existing engines. One example is nanoEFX: EiShin manufactures the intake air filter treatment in Japan; ECO EFX Solutions GmbH is responsible for its international commercialisation.

What the investment concerns

A shareholding is an interest in ECO EFX Solutions GmbH in Hamburg. An agreement to distribute its products in a particular country or industry is a separate business relationship.

SHAREHOLDER PERSPECTIVES

Two perspectives on ownership

Different participation models are possible. The choice starts with the role an investor would like to take in the Hamburg company.

A financial perspective

A financial investor's interest is in the Hamburg company as a whole: its direction, its management and the responsibilities of long-term ownership.

A strategic perspective

An industrial investor may also bring experience from running ships, managing road fleets or supplying equipment. That experience can shape the role it takes as a shareholder.
